INTRODUCTION

- A personal website or portfolio is an opportunity to reach more people with your work. It's also an extension of your personality and gives you the chance to craft a design that reflects who you are as a creative.
- Having profiles on LinkedIn, Behance, Dribbble, or other platforms are important, but a personal portfolio gives you the opportunity to express your own personal branding in more individualized way.
- If you're someone with any sort of creative output, you want to have an online presence to get exposure. Having a personal portfolio website may also play an important role in search engine optimization and may be the first thing potential clients see when they search your name.
- A personal website is essential in showing potential clients your work — helping you land more gigs doing more of what you love to do. Just as there are many types of creatives, there are many ways to put together a personal website.

ABOUT THE PROJECT

- While it is a word which was once only used for artists, a portfolio in the modern work sense refers to any body of creative work you use to show potential clients what you can do. A graphic designer, photographer, or artist might use a portfolio, but so do writers and other content creators, web developers, app developers, and even people like piercers and tattoo artists. It often stands in place of a traditional CV, although it can also be used to augment one.
- A portfolio website, obviously, is what happens when you take that body of work into online spaces. Instead of building a ‘standard’ website, most of which are single-page scrollers, you need to consider how best to show off your work through a digital medium.

TECHNOLOGY USED

HTML

Hypertext Markup Language

Create the structure

- Controls the layout of the content
- Provides structure for the web page design
- The fundamental building block of any web page

CSS

Cascading Style Sheet

Stylize the website

- Applies style to the web page elements
- Targets various screen sizes to make web pages responsive
- Primarily handles the "look and feel" of a web page

Javascript

Increase interactivity

- Adds interactivity to a web page
- Handles complex functions and features
- Programmatic code which enhances functionality

CONCLUSION

In proposed system, I present a website portfolio that will help you stand out from the crowd, show your uniqueness, build trust, and **make sure that others can actually find you.**

A portfolio website, obviously, is what happens when you take that body of work into online spaces. Instead of building a ‘standard’ website, most of which are single-page scrollers, you need to consider how best to show off your work through a digital medium.
